

JET BREAK SERIES

DEMULSIFIERS

GENERAL DESCRIPTION

The JET BREAK product line are customized blends of surfactants, coalescers, and wetters used to break oilfield water-in-oil emulsions found in oil production, waste oils, and tank bottoms.

The optimum product for each location is selected by bottle testing fresh emulsion and choosing the one that breaks fastest and has the cleanest interface and water.

The proper treating range is determined for each system and type of water conditions being treated.

APPLICATION

JET BREAK Demulsifiers may be added directly with a chemical pump into the production line upstream of the settling tank or treating system. It should be added to the system in a location that will achieve the proper mixing and contact.

HANDLING

Observe warning label on product container. Normal precautions for industrial chemical apply.

TYPICAL PHYSICAL PROPERTIES

| | |
|---------------|-----------------------------|
| Density | 0.8-1.1 |
| Appearance | Light amber to black liquid |
| Physical form | liquid |

AVAILABILITY

JET BREAK Demulsifiers are available in 55 gallon drums, bulk, and 5 gallon pails from ChemJet.
